

SELF-EVALUATION CHECKLIST FOR STA130 PROJECT POSTER

This checklist is for your own reference. The poster should contain the following sections:

Poster title

- contains an informative title
- team members' names, student numbers
- course number
- tutorial and group number

Introduction

- briefly states the topic you chose and how will you approach this topic
- provides background information needed to understand your poster
- briefly presents the statistical approach used and maybe even one or two key figure/tables to summarize the relevant data

Methods

- mentions specific variables in dataset used or any data wrangling performed
- completely and accurately describes the methods used, in paragraph form with functions and symbols in bold
- provides enough information to allow someone to replicate your work but excludes needless detail

Results

- presents the main findings
- includes figures, tables, graphs if they enhance clarity of presentation of information
- refers to the relevant self-explanatory figures, tables, graphs in the text (e.g., See Figure 1)
- has captions above tables but below figures and graphs (so they are self-contained)
- does not interpret the data or draw conclusions

Conclusion (either a separate section or as part of the Discussion)

- briefly restates the problem you are addressing and then states the main results (in complete sentences)
- interprets the results and summarizes how the results address the problem
- identifies any errors found
- discusses any challenges faced, and strengths and limitations of the project
- offers suggestions for improvement of the project (if any)

Writing style:

- Use bullet points to organize the main information under each section in a logical sequence.
- Writing should be concise, accurate and in complete English sentences.
- Proofread carefully to avoid any typos or obvious grammatical mistakes.
